Waste Handling Equipment News

SYRACUSE, NY — Emerald Equipment Systems Inc., Liverpool, NY (EES Inc.) has added the Kiverco range of Static and Mobile Recycling Equipment to their extensive line of equipment product offerings. EES Inc. provides specialized solutions to material handling problems throughout New York, New Jersey, Pennsylvania and Vermont.

Kiverco has grown rapidly in the last five years to become one of the United Kingdom's leading suppliers of C&D and MSW processing systems. Kiverco specializes in custom designed waste recycling solutions to meet specific customer requirements in terms of through put, feed material and floor plan limitations. Kiverco provides a complete package from initial design to manufacture, installation and full project support.

Kiverco Equipment and components that EES Inc. will offer contain complete systems including, but not limited to, picking stations, heavy duty flat deck scalping screens, trommel screens, conveyors, feeders, blowers, magnets and density separators. Each component is designed to be "modular." This minimizes installation time and reduces spillage issues at transfer points.

To meet growing demand for on site C&D material processing Kiverco has developed a varied range of mobile equipment.

The Kiverco KL620 Trommel is a track mounted unit with a 6-foot x 20-foot drum.

**EES can provide complete C & D or MSW Kiverco custom built recycling plants.**

The unit features a true "quick change" drum that hydraulically folds out to the side of the machine. This allows the drum to be changed in 15 minutes with a small pay loader or forklift. No large excavator is required to lift out the drum.

Other user friendly features of the KL620 include a direct wheel drum, drum angle adjustment, punch spiral plate and mesh drums.

EES Inc. can also provide Kiverco custom built products for the MSW reclamation

industry. One of the unique features of the Kiverco plants is the cabin enclosure around the picking area. A fully sealed enclosure protects employees from dust and noise. Equipped with lighting, heating and air conditioning it creates a safe, pleasant work environment.

The perfect companion for the KL620 Trommel is the Kiverco mobile picking station. Options available include a fully enclosed cabin, integral genset, magnetic separator and air separators.

The Trommel and mobile picking station is an ideal setup for environmental clean projects. Fines, plastics, wood, concrete, aggregate and metal can all be recovered and recycled, greatly reducing dumping costs.

Kiverco also specializes in Refuge Derived Fuel (RDF) systems that process waste C&D and MSW to recover a fuel product that can be used in place of traditional fossil fuels. RDF systems vary widely depending on the incinerator being used. Kiverco has the product expertise to screen, pick and shred material to meet the most stringent RDF requirements.

Emerald Equipment Systems Inc. has Kiverco picking stations and mobile trommel screens available in stock.
